

Pulse

Community Engagement Agent

A clear signal.
A connected community.

Brand style guide

OCTOBER 2026

Built around connection.

An identity system derived from the supplied logo. All usage rules and UI specifications are recommendations for adoption.

Human

Use approachable language and generous space. Help people understand the next step.

Responsive

Make activity and progress legible. Use the pulse motif as a quiet sign of connection.

Dependable

Anchor bright color with deep navy. Keep navigation, actions and status predictable.

THE SOURCE IDENTITY

HOW TO READ THIS GUIDE

SAMPLED

Exact pixel values from image(8).png. These describe the supplied raster, including its shading.

RECOMMENDED

Proposed typography, roles, dimensions, components and usage rules. They are not recovered source specifications.

One identity. Two practical formats.

Use the full lockup where the descriptor needs to be understood. Use the symbol where the Pulse name is already established.

PRIMARY LOCKUP

Symbol + Pulse wordmark + “Community Engagement Agent”. Keep the original alignment, letterforms and proportions together.

STANDALONE ICON

App navigation, profile avatars and favicons. Never squeeze the wordmark or descriptor into an icon.

Give the mark room to breathe.

Recommended starting rules. Measure from the visible artwork, not from transparent file padding.

X = 1/8 of the symbol's visible width.
Keep at least X clear on every side of the full lockup or standalone symbol. Give partner marks at least 2X separation.

FORMAT	SCREEN	PRINT
Full lockup	360 px wide	90 mm wide
Standalone symbol	32 px wide	8 mm wide
Favicon exception	16 / 32 px	Not for print

Sizes refer to visible artwork, except favicon canvases. A 512 px icon export contains roughly 406 px of visible artwork.

Below 360 px, use the icon and a live-text Pulse label nearby. At 16 px, inspect the favicon at actual size; the rear bubble will lose detail.

Protect the shape and the signal.

The supplied color lockup is strongest on white or very pale neutral surfaces.

USE / LIGHT SURFACE

Preserve proportions. Use the transparent PNG on a calm light background with the clear space intact.

USE / WHITE HOLDING PANEL

On dark or busy surfaces, place the full logo within a white panel. Keep the entire X clear-space zone inside the panel.

Keep the artwork intact

Do not stretch, rotate, retype, crop, add a shadow, reverse the gradient, or change the wordmark-to-symbol ratio.

Do not imply an approved variant

A white or one-color logo is not supplied. Commission and approve a master before using a reversed, monochrome or simplified mark.

The colors in the supplied logo.

Exact 8-bit RGB samples from image(8).png (1254 × 1254). Coordinates use a top-left origin, starting at zero.

Teal

#02CCCE

RGB 2, 204, 206

Pixel (110, 600)

Cyan blue

#028BEA

RGB 2, 139, 234

Pixel (250, 475)

Electric blue

#0571EB

RGB 5, 113, 235

Pixel (360, 525)

Deep navy

#01264C

RGB 1, 38, 76

Pixel (600, 550)

Slate

#516C8C

RGB 81, 108, 140

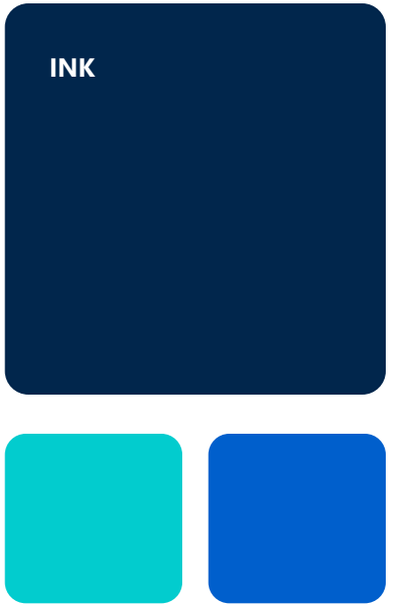

Pixel (600, 767)

Sampling is evidence, not a recovered brand specification. The artwork contains a gradient, antialiased edges and subtle tonal variation. These are selected interior pixels, not flat original swatches or measured gradient stops. The PNG has no embedded ICC profile; this guide interprets its RGB values as sRGB.

A practical palette for products.

Recommended roles use selected sampled values plus purpose-built UI colors. Keep accents restrained and content easy to read.

TOKEN / ROLE	VALUE	ORIGIN
Ink / headings and body	#01264C	Sampled; role recommended
Secondary text	#516C8C	Sampled; role recommended
Action / buttons and links	#005FCC	Recommended
Hover / pressed	#004DA6 / #003B80	Recommended
Canvas / surface	#F4F8FB / #FFFFFF	Recommended
Input border / decorative divider	#6B7F95 / #D9E4ED	Recommended
Success / warning / error	#137A53 / #8A5700 / #B42318	Recommended

DECORATIVE GRADIENT

Teal 0% / cyan 55% / blue 100%. Proposed stops; use outside text and control surfaces.

Friendly clarity, at every size.

Recommended primary family: Segoe UI. Its open forms and familiar interface rhythm complement the rounded Pulse wordmark.

Aa

Segoe UI

Regular 400 for reading. Semibold 600 for labels. Bold 700 for headlines. These specimens use Segoe UI; the logo’s original typeface has not been identified.

ROLE	SIZE / LINE HEIGHT	WEIGHT	USAGE
Display	48 / 56 px	700	Short marketing headlines
Page heading	32 / 40 px	700	One clear H1 per view
Section heading	24 / 32 px	600	Section hierarchy
Body	16 / 24 px	400	Product copy and reading
Label / helper	14 / 20 px	600 / 400	Controls and guidance

Web stack: "Segoe UI", system-ui, -apple-system, BlinkMacSystemFont, sans-serif. Use installed system fonts; do not redistribute font files without appropriate rights. Inter is an optional cross-platform alternative; recheck wrapping and metrics after substitution.

Make the next action unmistakable.

Recommended CSS dimensions: 44 px minimum height, 16 px horizontal padding, 8 px radius and a 16/24 px semibold label.

PRIMARY

Start a conversation

Use one dominant action per section. Primary buttons use Action blue with white text.

SECONDARY

View activity

For related alternatives. Preserve the border and text contrast on hover and focus.

TEXT ACTION

View all conversations

For lower emphasis actions. Underline links in body copy; use a button for in-place actions.

STATE SPECIFICATIONS

Default	Hover	Pressed	Focus	Disabled
#005FCC	#004DA6	#003B80	#005FCC	#D9E4ED

Focus: 2 px Action-blue outline with a 2 px white gap on light surfaces. Use a white outline on navy. Loading: retain button width and show “Sending…”. Disabled: expose the unavailable state and explain how to proceed.

A calm interface with clear feedback.

Recommended 4 px spacing unit: 4, 8, 12, 16, 24, 32, 48, 64. Use 8 px control corners and 12 px card corners.

FORM FIELD

Community name

Northside neighbors

Always show a visible label. Use 16 px input text and 12-16 px inset padding; placeholders supplement labels.

Email address

alex@

Error: enter a complete email address.

Connect the error to its field and offer a correction. Do not communicate errors through color alone.

CONVERSATION CARD

Weekly community check-in

Review replies and plan your next update.

Active

View conversation

24 px card padding; 16 px content gaps. Keep the title, status and action in a stable order.

Success: your update is ready.

Use a text label and a familiar status icon. Reserve semantic colors for actual status.

Color must support understanding.

Target WCAG 2.2 AA in the implemented product. The ratios below test flat sRGB color pairs, not an entire interface.

FOREGROUND / BACKGROUND	RATIO	NORMAL TEXT
Navy #01264C / white	15.19:1	Pass
Slate #516C8C / white	5.42:1	Pass
White / Action #005FCC	5.98:1	Pass
White / Electric blue #0571EB	4.60:1	Pass; modest margin
White / Teal #02CCCE	1.99:1	Fail
Navy #01264C / Teal	7.62:1	Pass

Do not put white text over the teal-to-blue gradient. Test its lightest area. Border #6B7F95 on white: 4.12:1; divider #D9E4ED is decorative only. Ratios calculated without rounding for pass/fail; display values rounded to two decimals.

Text and meaningful graphics

Normal text needs 4.5:1; large text needs 3:1. Large means at least 24 CSS px regular or about 18.67 px bold. Essential control boundaries and graphic cues need 3:1.

Targets and keyboard focus

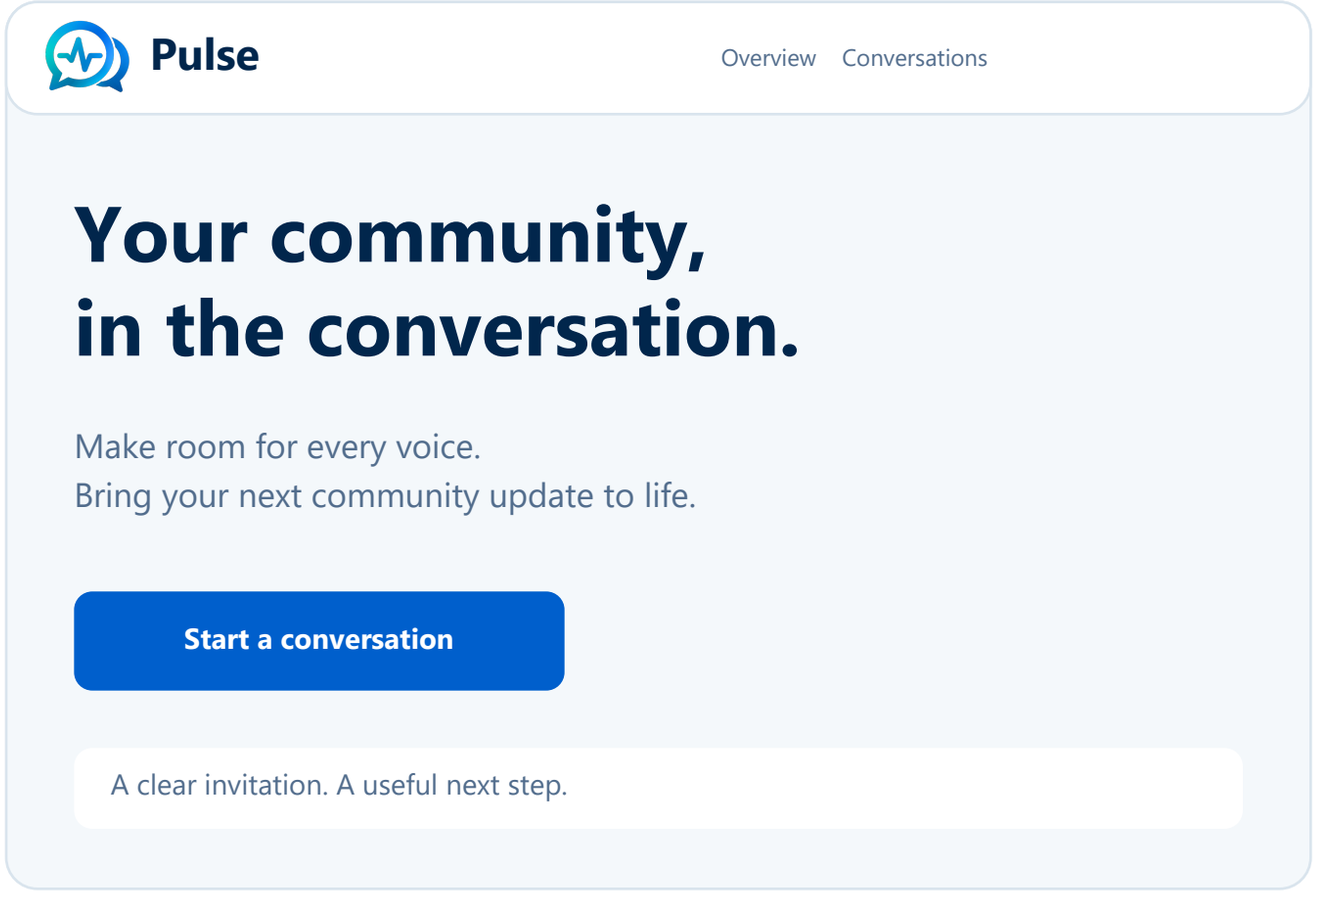

WCAG 2.2 AA target size is 24 × 24 CSS px, with exceptions. Pulse recommends 44 × 44 px. Keep keyboard focus visible and avoid sticky UI hiding the focused control.

Meaning beyond color

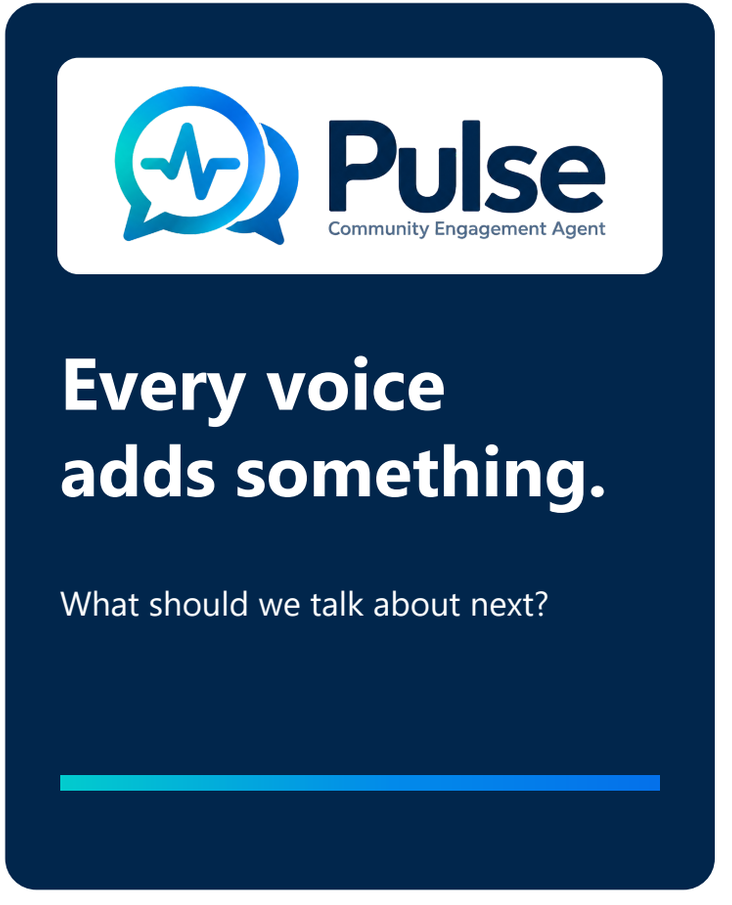

Underline links, label status and errors, and provide keyboard operation. Use “Pulse” as logo alt text, or “Pulse home” for a home link. Decorative duplicates use empty alt text.

Show up with warmth and structure.

Illustrative layouts and copy; these are design examples, not claims about existing product features or customer results.

PRODUCT / ICON + LIVE TEXT

SOCIAL / FULL LOCKUP

Small format. Real transparency.

The icon files use alpha transparency throughout the exterior and the negative spaces inside the speech bubbles.

TRANSPARENT PNG

The 512 px canvas contains the original symbol at native resolution with transparent padding. The icon is not a generic action glyph: use a separate UI icon for messaging, alerts or health status.

SIZE LADDER

16 px 32 px 48 px 64 px 96 px

FILES	INTENDED USE
16, 32, 48, 64 PNG + ICO	Browser favicons and compact UI
128, 180, 192, 256 PNG	Avatars and app integration
512 PNG	Native-resolution square master
1024 PNG	Upscaled convenience export

A transparent full logo is also included. Use it on light surfaces; the navy wordmark disappears on navy. Platform-specific app icons may require opaque backgrounds or a separate safe-area template.

Ready for consistent use.

Keep the supplied artwork, the sampled evidence and the recommended design system distinct as the brand evolves.

Production files

Use the transparent logo PNG and square icon exports in the accompanying ZIP. CSS tokens record sampled origins and recommended UI roles. No SVG or vector master is included.

Screen and print

Do not confuse pixel dimensions with vector resolution. The visible full lockup is about 1082 px wide: approximately 92 mm at 300 ppi. For larger print, commission a faithful vector master.

Color management

Use sRGB for screen delivery. There are no measured CMYK or Pantone equivalents. Convert through the printer's ICC workflow and approve a physical proof before production.
